

Experiential learning to support a trauma-informed approach.

Who We Are

Cornerstone VR is an award-winning virtual reality based learning and intervention tool used by professionals and caregivers who work with vulnerable children and their families, and in application with young people directly.

Our 360-degree immersive films allow users to 'walk in the shoes' of children and young people facing difficult, real-world scenarios, bringing the challenges of trauma, neglect, and societal pressures to life.

OUR JOURNEY

ONE PROGRAMME, TWO APPLICATIONS:

Our VR programme supports 1-1 and group interventions with young people by enabling open, guided conversations around real-life risks, while also strengthening trauma-informed training for professionals to build empathy, awareness, and more effective support strategies.

OUTCOMES ACHIEVED WITH VR

- Improved understanding of children and young people's behaviour and needs.
- Increased empathy toward children and adults who have experienced trauma.
- Bridging communication barriers with a shared understanding of trauma, attachment and societal challenges.

WHAT DO OUR PARTNERS THINK

I have been very impressed by the impact the VR content has. Participants frequently comment that viewing the situations from a child's perspective helps them reconsider the depth of the trauma that children experience, and understand better the enduring legacy it leaves.

Education Development Advisor

Stockton Virtual School

Following use of Cornerstone VR

96%

of participants reported that they would consider alternative ways to approach situations in their work.

96%

of participants gained a deeper understanding of the child's perspective.
